(51)Int.Cl. G02F 1/133

(21)Application number : 03-309915

(71)Applicant : SEMICONDUCTOR ENERGY LAB  
CO LTD

(22)Date of filing : 29.10.1991

(72)Inventor : YAMAZAKI SHUNPEI  
TAKEMURA YASUHIKO

## (54) ELECTROOPTIC DISPLAY DEVICE AND ITS DISPLAY METHOD

## (57)Abstract:

**PURPOSE:** To make a display easy to see and reduce the power consumption of the display device which makes the display by small-frequency rewriting by providing a 1st element which selects picture elements, one by one, a memory element stored with information sent from the 1st element, and a 2nd element which feeds electricity to the picture elements according to the signal held in the memory element.

**CONSTITUTION:** The 1st and 2nd elements are TFTs shown by Tr1 and Tr2 respectively. The gate electrode of the Tr1 is connected to a selection line VG, the drain is connected to a data line VD, and the source is connected to one end of a ferroelectric capacitor FE. The gate electrode of the Tr2 is connected to the other end of the ferroelectric capacitor FE, the drain is connected to a voltage supply line VLC for applying a voltage to the picture elements, and the source is connected to one end of the electrode of a picture element capacitor LC. This constitution provides the memory performance of the picture elements and the compression, omission, etc., of a redundancy signal are therefore made possible to reduce the power consumption or make the response fast.

## LEGAL STATUS

[Date of request for examination] 26.03.1992

[Date of sending the examiner's decision of rejection] 04.07.1995

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 2775040

[Date of registration] 01.05.1998

[Number of appeal against examiner's decision of rejection] 07-16670

[Date of requesting appeal against examiner's decision of rejection] 03.08.1995
